Guide to your full spectrum grow light bulb

Thank you for purchasing your Full Spectrum Grow Light! Below are some directions on using this specific grow light. Your Grow Light has a wall-draw power of up to 50W with a brightness of 100W. Always place the light above the plants you wish to grow.

SAFETY INFO: Your grow light has a silent, inbuilt fan to keep temperatures down, but be aware that the bulb will still get warm to touch. Ensure that the bulb is not touching or within close proximity of objects while in use. Do not cover or use in small enclosed spaces (open lamp shades are fine).

This bulb is heavier than a regular light bulb. Please ensure it is fitted securely before use.

For safety, unplug or turn off the light in the chance of electrical storms.
